KEYMACRO is a quick and easy utility that helps you to create keyboard shortcuts for your favorite applications. It allows you to assign up to eight keyboard shortcuts with custom characters to most of your installed applications. More detailed settings like the specific keys to bind, the duration of the shortcut and how to start the application in windows mode are available. The application is supported by most modern operating systems and it works for most applications, but has limitations in case you are using windows 7/8. It can be really useful if you frequently launch the same applications or need to bind some of your shortcuts to perform repetitive tasks. For instance, if you often have to insert special characters in a document that is accessed frequently, it's easy to create a shortcut and launch it from the context menu of Word, but if you want to access it on web pages, you'll need to right-click to select the option. Once installed, the shortcuts are available from the Keyboard Shortcuts dialog. The application also saves the config file in %APPDATA% folder by default. You can also quickly add new keys to the list if you want to use the same shortcut for an application that you don't already have assigned. By default, KEYMACRO displays only the keys that are assigned to the currently active application, so it doesn't show the keys of all the applications you may have installed. The program displays a text count indicating how many of the currently installed applications have been assigned a shortcut. For instance, if you have selected Auto_Run, Command_Line, Calendar, Character Map, Clear_Msg, Character_Editor, Dictionary, File_Manager, Gnu_Emacs, Gnu_Emacs_X11, Grep, Interact, IRC, PGP, Pidgin, Prayer_Tools, Rosetta_Stone, Scroll_Back, Screensaver, Set_Font, Sniffer, Terminal, Time_Zone, Tyninator, Union_Finder, URL_Finder, You_Type, Zaurus, Thesaurus, USB_Tools and USB_Calculator, then the number of the shortcuts will be equal to the number of applications you may have installed. To enable a new application, right-click in the list and select Add new. As soon as you'll add a new key, you'll be prompted to select the currently active application. The shortcuts assigned by KEYMACRO can 77a5ca646e

What's New in the Bluescreen Screensaver?

The thing that Windows users fear most is the famous Blue Screen. Bluescreen Screensaver is a small utility that simulates this feared error message. The app has a simple interface and can be handled easily, regardless if you have any previous experience with similar apps. Also known as the "Blue Screen of Death", this error message is displayed whenever there are critical system errors. It can be caused by hardware inconsistencies, but also some software issues. Since the way it looks varies in every operating system version, the screensaver emulates the one specific for the type of Windows you're running, whether it's 95, 98, ME, NT, 2000 or XP. As mentioned, the app installs as a screensaver and can be accessed through the Windows Screen Saver settings menu. Here, you can preview the app after selecting it from the drop-down list. Furthermore, you may modify the number of minutes it is required for the computer to remain idle before the screen saver covers the desktop. Additionally, you may have the system display a logon screen on resume. The app has no additional settings, so the options made available by the operating system are the only ones you may modify. The bottom line is that Bluescreen Screensaver is a nice app that might give you a scare every time it pops up, before you remember that there's no cause to panic. Inexperienced users should find the app easy to install and work with, mostly thanks to the absence of any advanced settings.
