JTides Crack Download [March-2022]

JTides is an advanced, accurate, easy-to-use tide and current prediction application. JTides predicts tides and currents using a large database of US and worldwide locations. It graphs its predictions in many useful ways. In comparison tests, JTides' predictions are in good to excellent agreement with a sampling of published and on-line tide tables (but read the caveat below). Also, because JTides contain data for so many sites (over 2000 in the default configuration), you can obtain tidal forecasts for places where there are no printed tables available. And if you want, you can print a calendar of tidal events from JTides' calendar display. JTides is a Java MDI (Multi-Document Interface) application - this means many locations can be graphed at the same time. You may also print graphic tidal charts, export databases, or create sets of HTML pages, each summarizing a month of tidal forecasts. These HTML pages can be downloaded into your PDA for a quick tidal reference in the field, or published on your Web site. Features: - Sea water data: tide and current forecast in the water - Location information: graph location (lat, lon) of tide forecast - Graphical and textual display of data - Predicted tide or current - CIRCULATION current speed (mph or kts) and direction - ACCURACY: Mean-Sea-Level (MSL) average accuracy varies from location to location (0.5m at Beaufort to 0.1m at 3 weeks) - HORIZONTAL ACCURACY: Average MSL accuracy for small local grids is 0.5m - LATITUDE (degrees): graph and plot x-axis location for latitude - Longitude (degrees): graph and plot y-axis location for longitude - GRAPH: Graph of the sea-water level at your location (in meters) - GRAPHICAL DISPLAY: Graphically plotted times and predicted waves - CALENDAR: Print a calendar of tidal events - ALARM CLOCK: Alarm clock for wake up tides - DATA EXPORT: Print, email or ftp to your PC a monthly summarized database - CALENDAR: Print a calendar of tidal events (1 year, 1 month) - ALARM CLOCK: Alarm clock for wake up tides - DATA EXPORT: Print, email or ftp to your PC a monthly

JTides

JTides Activator X64 [Updated]

JTides is designed for predicting tidal currents in the Gulf of Mexico and northern Atlantic, for the purposes of marine navigation and research. JTides is also suitable for predicting tidal currents for any other locations with a sufficient number of local tide stations. JTides does not predict tidal currents for the Pacific or Indian Oceans, or for the Mediterranean Sea. Note that there is no support for the AQUA-TIDE series of tide prediction packages, or for the Numerical Tides program. The JTides "Tidal Tides" chart type is based on 17 different charts from the National Oceanic and Atmospheric Administration (NOAA) website, and is consistent with the FreeTides tide prediction package. The JTides "Wave Count" chart type is based on 9 different charts from the NOAA website, and is consistent with the US and Irish tide prediction program "Wavespot". The JTides "Wave Count" chart type is based on 9 different charts from the NOAA website, and is consistent with the FreeTides tide prediction package. The JTides "Chart" chart type is based on 5 different charts from the NOAA website, and is consistent with the Tides program (U.S. Army Corps of Engineers, 1983). There is a JTides "Pressure" chart type based on 11 different charts from the NOAA website, and is consistent with the FP3 program. There is a JTides "Stream Flow" chart type based on 11 different charts from the NOAA website, and is consistent with the FRBDC program. The JTides "Flow" chart type is based on 7 different charts from the NOAA website, and is consistent with the FP3 program. The JTides "Pressure" chart type is based on 11 different charts from the NOAA website, and is consistent with the FP3 program. The JTides "Accuracy" chart type is based on the NOAA website, and is consistent with the Aquatide program. The JTides "Error" chart type is based on the NOAA website, and is consistent with the FP3 program. The JTides "Wavespot" chart type is based on the NOAA website, and is consistent with the Wavespot program. The JTides "Tide table" chart type is based on an on-line tide table from the NOAA website. The JTides "Wavespot" chart type is based on an
