It feels a bit as if a Moog synthesizer was softly humming. The contour of the sound is pleasant, the spectrum very clear. Patch bay: Minitron Full Crack has a conventional patch bay. Construction: The polypropylene case is very light, it feels more like a pad than a synth case. The metal chassis is nicely shaped and no decoration has been applied. The footprint is approximately the size of a MiniMoog. The analog circuit board is mounted on top of the case. The front of the Minitron features a 3/4 view of the modules and the patchbay. It is a good design for this size and shape. The back of the Minitron is covered by a mesh panel, which makes it much more compact. The rear of the Minitron can also be used as a speaker output. Size: The Minitron is about 120 x 45 x 38 mm (4.72 x 1.75 x 1.53 inches).
